

Type LCT-01 Load Cell Tester

The Load Cell Tester Type LCT-01 is a hand-held, easy-to-use device for load cell testing and error detection in load cell weighing systems.

The load cell can be tested without being removed from the weighing system.

The operation is menu driven. The test is completely automatic, the test results are available on the display.

The following characteristics are measured:

Input Resistance, Output Resistance and Insulation Resistance (≥ 10 M Ohm) as well as the Zero Balance of the load cell with indication of the actual load in % of Maximum Capacity.

For all technicians in the weighing- and/or process industry the LCT-01 is a very important device.
